

Advantages of GRP compared to Stainless Steel Sheets

### Overview product advantages

- Low weight at high mechanical strength
- Weathering resistance especially against hail
- GRP is cheaper than stainless steel
- Lower deformation-incline than stainless steel
- GRP is also corrosion resistance (no rust)
- On demand the GRP is protected by a special gel coat layer instead of a common finishing on stainless steel
- The gel coat is chemically bonded on the GRP (spalling like on common finishing is not possible)
- Gel coat provides high UV and colour stability over a long period
- High gloss
- Non-porous surface
- Easy to clean
- Unlimited colouring possibilities
- Resistant to atmosphere conditions
- The gel coat has a high flexibility and tensile elongation (it is crack insensitive)

#### Overview product advantages

- Resistant to chemicals
- GRP and the gel coat layer are solid coloured compared to painting
- printing and painting of the GRP is possible
- Easy to handle in the process (sawing, drilling, jet cutting, ...)
- Compared to the sharpness of the edges of stainless steel the risk of injury (cutting) with GRP is lower
- High chunking resistance (screws, rivets)
- No breaks or buckling while processing
- Much better thermal insulation than stainless steel
- GRP has a better sound reduction index than stainless steel
- Better environmental balance than with many other materials
- GRP is (without any special additives) an insulator
- GRP transfers forces only remote
- Repairing possibilities of damages and scratches
- Consistent quality through continuous production process
- Production width of GRP up to 3,20m!
- Qualified for a usage in the food industry
- Moisture resistant

- Weathering resistance especially against hail
- Lower deformation-incline than stainless steel

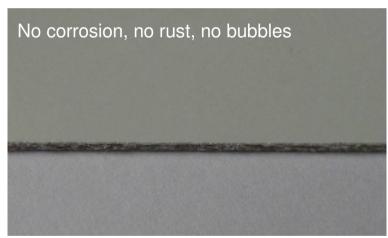

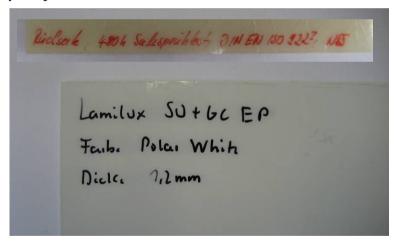

Corrosion resistance (like stainless steel, no rust)

Towards DIN EN ISO 9227 NSS "salt spray test" 480 h

LAMILUX Super Plus Gelcoat 1,2 mm

LAMILUX Super Plus Gelcoat 1,2 mm

→ The LAMILUX Super Plus Gelcoat 1,2 mm showed no corrosion in the "salt spray test"

#### Price

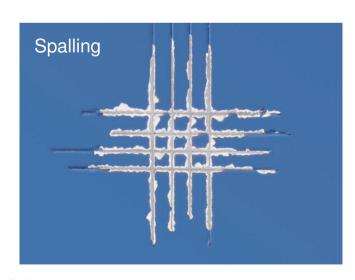

- depending on quality and thickness, GRP is often cheaper than Stainless Steel
  - e.g. 0,6mm Stainless Steel / m²:
    0,6mm \* 8,0kg/m²mm \* 230 Rs/kg = 1104 Rs/m²

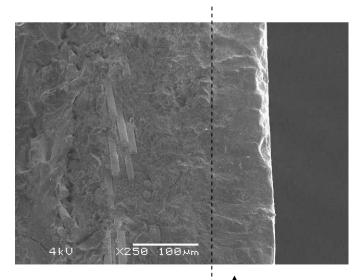

- e.g. Super Plus Gelcoat 1,5mm RAL 9016, Corona
  (20ft Container, 4.400m²/delivery, CFR Nava Sheva)
  1 € = 67,16 Rs (04.05.09) → 7,25 €/m² (04.05.09, Rud) = 486,91 Rs/m²
- e.g. Super Plus Gelcoat 2,0mm RAL 9016, Corona
  (20ft Container, 4.400m²/delivery, CFR Nava Sheva)
  1 € = 67,16 Rs (04.05.09) → 9,15 €/m² (04.05.09, Rud) = 614,51 Rs/m²

- On demand the GRP is protected by a special gel coat layer instead of a common finishing on stainless steel
- This provides a lot of advantages
- The gel coat is chemically bonded on the GRP Spalling like on common finishing is not possible
- The gel coat is fibre free and based on isophthalic acid

Gel coat provides high UV and colour stability over a long period

High gloss

Non-porous surface

Easy to clean

- Unlimited colouring possibilities
  - RAL
  - NCS
  - Customer specific
  - Metallic
  - Translucent
- Resistance to corrosion
- Resistant to atmosphere conditions
  - Rainwater, seawater, de-icing salt, environmental pollution durability
  - Tough surface against dust and sand erosion

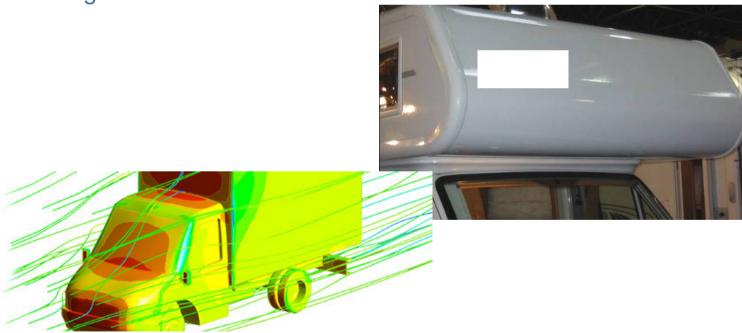

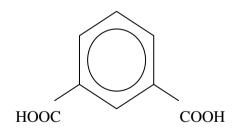

The gel coat has a high flexibility and tensile elongation

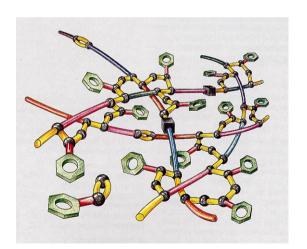

It is to a great extend crack resistant

- Resistant to chemicals
- UP resin gel coat based on isophthalic acid

- GRP and the gel coat layer are solid coloured compared to painting
  - Insensitive to scratches
  - Non-sensitive to stone-chipping
  - Additional painting is not necessary

- Nevertheless printing and painting of the GRP is possible
- Easy to roughen
- Uncomplicated to paint

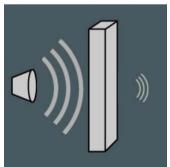

- Easy to handle in the process (sawing, drilling, jet cutting, ...)
- Compared to the sharpness of the edges of stainless steel the risk of injury (cutting) with GRP is lower
- High chunking resistance (screws, rivets)
- No breaks or buckling while processing

- High strength
- Much better thermal insulation than stainless steel
  - GRP has a heat conductivity about 0,21 W/mK
  - Stainless steel has a over 70 times higher heat conductivity with approx. 15 W/mK
- GRP has a better sound reduction index than stainless steel
  - this is especially an advantage for applications with higher demands on sound reduction (e.g. roof)

#### Better environmental balance than with many other materials

Environmental balance	Unit	Construction Steel S235J2	Stainless Steel AISI316L	GRP E23	Aluminium AlMgSi1
Energy consumption	GJ	270	300	120	269
Critical volume of polluted air	m³	697	k.A.	74	565
Critical volume of polluted water	m³	7,3 * 106	k.A.	17,7 * 106	53,6 * 10 <sup>6</sup>

Source: Greenbuilding, Issue 05/09, Bauen, Page 27

- the production of Stainless steel has a approx. 150 % higher energy consumption in comparison to the production of GRP (Influence on CO<sub>2</sub>-balance!)
- in comparison to the production of GRP, the production of Construction steel for example has a 9,4 times higher volume of critical polluted air

- GRP is (without any special additives) an insulator
- GRP does not conduct electricity
  - Insulator  $\rho > 10^{12} \, \Omega^* \text{cm}$
  - Semiconductor  $\rho = 10^{-4} \text{ to } 10^{12} \,\Omega^* \text{cm}$
  - Conductor  $\rho < 10^{-4} \, \Omega^* \text{cm}$

**GRP** 

specific resistance: approx.  $10^{15} - 10^{16} \,\Omega^*$ cm

Steel

specific resistance: approx.  $10^{-8}$  to  $20^{-8}$   $\Omega^*$ cm

- GRP transfers forces only remote
  - In case of a small accident merely a slight part around the force transmission point has been damaged
- Repairing possibilities of damages and scratches
  - For more information, see our <u>repair manual and recommendations</u> on the LAMILUX homepage and do not hesitate to contact us if you need any support

- Using GRP can save weight (and energy) in a lot of cases
  - Density of GRP (in our case) is about 1,35 g/cm<sup>3</sup>
  - Density of stainless steel is about  $7.85 8.00 \text{ g/cm}^3$  (depending on alloy)

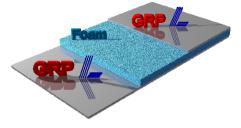

- Using GRP can save weight (and energy) in a lot of cases
  - For instance this means for a sandwich-panel:

If you use 2.0 mm GRP instead of 0.6 mm stainless steel

GRP:  $2 * 1 m^2 * 2.0 mm * 1,35 kg/m^2*mm = 5,4 kg$ Steel:  $2 * 1 m^2 * 0.6 mm * 8,00 kg/m^2*mm = 9,6 kg$ 

- → in this case you can save approx. 4,2 kg per m² sandwich panel or in other words:
- → you reduce the weight of the sandwich panel about 44 %

### Physical Properties of GRP in comparison to Stainless Steel

	GRP	Stainless Steel	
	GH ti		
Density [kg/m³]	approx. 1.350	7.850 — 8.000	
	(depending on glass content)	(depending on alloy)	
Linear expansion	approx. 30 - 40 * 10 <sup>-6</sup> 1/K (depending on glass content, thickness, resin)	10 – 16 * 10 <sup>-6</sup> 1/K	
Heat conductivity [W/mK]	0,21	15	
Tensile strength [N/mm²]	35 - 150 (depending on glass content / glass construction, product-type)	depending on alloy	
Tensile elongation [%]	1,3-4,0 (depending on glass content, resin)	depending on alloy	

Physical Properties of GRP in comparison to Stainless Steel

Thin sheet steel often has to be "corrugated" to handle it easy in the

process and to have a good stiffness in the product

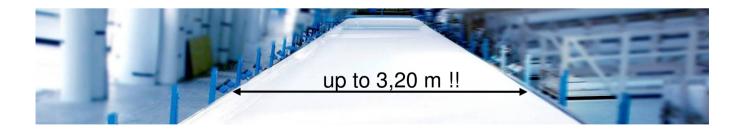

This is not necessary with GRP

The high stiffness of GRP allows to use a flat and smooth surface

- Consistent quality through continuous production process
- We can supply you with GRP up to 3,20 m width, this is really unique in the continuous production of GRP and continuous sheet materials
- Due to our automated temperature control on the line we are able to produce tension free material

### Overview of LAMILUX GRP Product Range

Thickness 0,8 – 5,0 mm

Width max. 3.200 mm

Delivery form sheets up to 12 m length - coils up to 300 m length

Colour
 RAL, NCS, dual colour or customized colours

Reinforcement glass mats, woven fabric, multi-axial fabrics

Surface veil, gel coat

Optical characteristics woven structure, veil, high gloss, mat finish, decor

Reverse side smooth, corona treated, sanded

 Besides the unlimited colour range it is possible to produce translucent material, for instance for the roof of trailers

- Our material is qualified for a usage in the food industry
  - This was analysed and approved by "Institut Nehring" (extract from the original test certificate)

- Due to the moisture resistance of the GRP, the material has a good resistance to microorganisms and moulds
  - For example: tests showed, that LAMILUX GRP material without any antibacterial additives is resistant to staphylococcus aureus ATCC 6538
    - After 24 hours nothing could be detected

[cfu/sample]			
Test strain>	Staphyloccus aureus ATCC 6538		
Samples	0'	after 24 hours	
<b>01</b> CXS07.0239-1,	1.0*10 <sup>5</sup>	<100	
Blank	1.1*10 <sup>5</sup>	<100	
<b>02</b> CXS07.0239-2,		<100	
IRGAGUARD B6000		<100	
<b>03</b> CXS07.0239-3,		<100	
IRGAGUARD B6000		<100	
<b>01</b> CXS07.0239-1,	1.0*10 <sup>5</sup>	<100	
Blank Without preincubation	1.1*10 <sup>5</sup>	<100	
O/n culture Staphylococcus	8 7*108 KBF/ml (1·10000

### **Quality and Consistency**

Raw Material Control

- 100% of all resins
- Partial control of glass mats

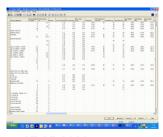

- 100% process control
- Final control:
  - Every second coil: barcol hardness, thickness, delamination, transparent
  - 2 times per shift: surface tension, gel coat thickness
  - 3 times per shift: pinholes

#### Feedback and Statistic

#### Laboratory

- Approx. 1% of the production
- Tensile and binding strength
- Residual styrene
- Gloss
- Yellowing
- Long term surface tension
- IR-test

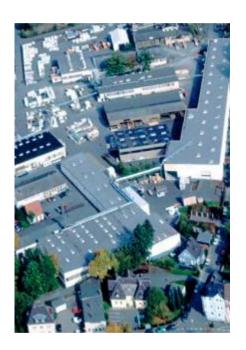

- Barcol hardness
- Glass content
- Surface tension, dyne level
- Long term temperature tests
- Bending radius
